

RICE POLISHER

FRP - 20 / - 40

N.P.T GROUP

FEATURES:

- Higher Commercial Value**
 The surface of the milled rice is smooth and clean. Creating a better looking and feeling rice gives the miller advantages over his competitors, especially when rice is presented to consumers in clear packaging.
- Safe Storage**
 The milled rice can be stored longer because the surface of the grain is smooth and there are less grooves or dimples where rice bran, dust, fungi, etc. can stay and grow.
- Multi-Pass Polishing**
 The KB machines can be used in series to create a 'silky polished' rice.
- Less Downtime for Subsequent Machines**
 Because the machine removes adhering bran and fine powder and produces very clean milled rice, bran accumulation in the milled rice passage through the rice grader, color sorter, rotary sifter, etc is much less.

OPERATIONS:

- This equipment is applied to make rice shining and nice, approximately 2.5 to 4 ton/hr, according to the variety of the grain and his moisture.
- Through the application of humidity controlled are during whitening process, rice comes into the chamber machine, following the abrasive roll type is combined with water spraying, a friction principle was used to give a better finish to the surface of milled rice. And the result is beautifully polished rice due to fine bran on surface of rice to be taken out.
- The bran, dust is sucked crossing the holes of the sifters and move out by suction fan.

DIMENSIONS:

Model	Input Capacity (T/hr)	Required power (kW)	Main shaft revolution (rpm)	Bran collecting fan (kW)	Outside dimensions (mm)			Weight (kg)
FRP-20	2-3	22/30	900	4	1250	750	2200	700
FRP-40	3-4	55/75	1000	5.5	1835	930	2800	1000
